Health & Vitality

If you've invested time, money and effort in your fish, you'll want to make sure they stay healthy.

Health & Vitality is a probiotic treatment that helps protect your fish from infection and naturally promotes good health and growth.

It works by combating pathogens in two main ways:

Firstly, it introduces beneficial microorganisms to out-compete the pathogens and deny them nutrients and room to grow (this process is known as competitive inhibition).

Secondly, Health & Vitality's unique formulation provides competitive exclusion, which creates a physical, living barrier on the body of the fish. This prevents your fish being attacked by waterborne pathogens.

Health & Vitality also stabilizes the dissolved oxygen (DO) in the pond water, encouraging healthy populations of microorganisms and promoting a healthy, stable ecosystem within your pond and biological filter, ultimately improving respiration and the growth potential of your fish.

Trust nature to come up with the perfect way to protect your fish.

Health & Vitality – for fish that thrive.

	RECONDITION	RECONDITION	MAINTENANCE
FREQUENCY	WEEK 1	WEEK 2	WEEKLY
DOSE	25	25	12.5

Dosage in ml/1000L

For healthier fish – the natural way.

- **Powerful and safe probiotic treatment to prevent infection in your fish**
- **Effective protection against waterborne pathogens**
- **Promotes good health and growth**
- **Works all year round for complete protection**

“In the past I lost fish almost every year but since I have used Health & Vitality, all my fish are thriving.”
Mr R Freemantle

5

BactaTreat

Increasingly, traditional antibiotics are being rendered ineffective in the battle against bacterial infection. Many strains of harmful bacteria are now resistant to even the most powerful antibiotics.

That's why EcoPure Pond System has developed BactaTreat. Now you can combat bacterial infections like ulcers and fin rot with complete confidence. Containing a unique blend of herbal extracts, BactaTreat is totally natural and works efficiently without any adverse impact on the nitrifying bacteria that are vital to maintain the balance in your filters.

The selected herbal extracts have powerful, broad spectrum anti-bacterial properties that quickly tackle infections on your fish caused by commonly occurring harmful bacteria. The healing action then continues to repair the affected tissue to restore your fish to good health.

BactaTreat - the natural treatment for bacterial infections.

FREQUENCY	DAILY
DOSE	50

Dosage in ml/1000L

The totally natural way to combat bacterial infections.

- **Contains broad spectrum anti-bacterial properties**
- **Unique blend of herbal extracts**
- **Maintains water quality**
- **Restores your fish to good health**

“I am absolutely delighted - I would recommend your products to all pond-keepers.”
Mr D J Stamp

6

ParaTreat

Parasites are microscopic organisms that can create major health problems for fish. They fall into two broad categories: macro parasites including argulus, lemeria, gyrodactylus and dactylogyrus and the protozoans which include trichodina, costia, white spot and chilodonella.

Parasites can exist in any pond but if your fish are healthy, they generally remain unaffected. However, a number of factors including poor water quality can cause your fish to become stressed. This compromises their immune system and leaves them vulnerable to parasitic attack.

Parasitic infestations are difficult to treat and traditionally chemicals have been used as the main defence. However, these can destabilize the ecosystem in the pond and further weaken the immune system of the fish.

That's why EcoPure Pond System has developed ParaTreat. Now you can combat parasitic infestations like white spot, gill flukes, skin flukes, trichodina and chilodonella with complete confidence. Containing a unique blend of herbal extracts, ParaTreat is totally natural and works efficiently and without any adverse impact on the nitrifying bacteria that are vital to maintain the balance in your filters.

The powerful anti-parasitic properties of the selected herbal extracts quickly remove infestations of your fish. The healing action then continues to repair the affected tissue to restore your fish to good health.

ParaTreat - the natural treatment for parasitic infections.

	5 DAY COURSE
FREQUENCY	DAILY
DOSE	50

Dosage in ml/1000L

The powerful way to combat parasitic infestation.

- **Efficiently removes macro parasites and protozoans**
- **Does not cause stress in fish**
- **Maintains nitrifying bacteria**
- **Restores your fish to good health**

“Superb products - they really work well.”
Mr P Estherby

Statement of Quality
The cultures used in all EcoPure Pond System products are completely safe for fish and plants. More than one treatment may be used at the same time.

All EcoPure products are certified by an independent standards laboratory.

Products available in 1L & 250ml packs.

easy steps to the perfect pond.

The EcoPure Pond System has been carefully developed - through a process of isolation, combination and enrichment of completely natural, beneficial microorganisms - to remedy all the problems pond-keepers face.

From start-up, through building a healthy pond environment, to banishing blanket weed and fighting fish infections, using the EcoPure Pond System is easy, effective and excellent value for money.

	START-UP	RECONDITION	ADD STOCK
FREQUENCY	ONCE	ONCE	ONCE
DOSE	15	15	15

Dosage in ml/1000L

Natural help for pond start-up and stock increase.

- Minimizes the dangers to your fish when adding new stock
- Rapidly matures a new filter system within a few days
- Reinstates filters quickly after cleaning
- Eliminates nitrite spikes to safeguard your fish
- Minimizes filter media maintenance

“After our filter failure we used EcoStart and within days our pond had recovered.”
Mr & Mrs Millard

1

EcoStart

Left to its own devices, a newly created pond can take weeks to mature. During the time it takes for your biological filter to become conditioned, your fish are increasingly at risk from elevated levels of ammonia and nitrite; toxins produced by the breakdown of fish and pond waste.

EcoStart is a completely natural product which rapidly matures your biological filter to minimize the dangers to your fish during start-up and when adding new stock. It contains a highly concentrated mixed culture of nitrifying and denitrifying bacteria, which quickly create a stable and healthy ecosystem by reducing the levels of ammonia, nitrite and nitrate and improving water quality.

EcoStart also allows you to safely introduce more stock without any risks to your fish, by boosting your existing system.

Regular use protects the active biofilm in your biological filter from serious degeneration caused by the attack of opportunistic microorganisms.

After routine cleaning of your biological filter, EcoStart revives and stabilizes the entire system, quickly returning it to full maturation and reducing the risk to your fish.

It also provides an effective and immediate treatment to combat ammonia and nitrite spikes which can develop in older or poorly maintained ponds due to the substantial build-up of sludge.

Give your pond a head start with EcoStart.

FREQUENCY	WEEKLY	MONTHLY
DOSE	20	20

Dosage in ml/1000L

The simple way to keep your pond healthy.

- Cleanses and clarifies the pond to give you crystal clear water
- Reduces suspended solids to keep the pond clear
- Stabilizes the dissolved oxygen (DO) concentration – vital for fish health
- Reduces unsightly surface foaming and staining
- Stabilizes the ecosystem to ensure your pond stays healthy

“Within two and a half weeks my pond was restored to its former glory – really clear and healthy.”
Mr Steve Bell

2

PondRegulator

All ponds experience a build-up of organic solids and suspended solids, which cause the biological filter to clog and reduce water clarity and quality. Furthermore, excess fish food, leaves, dead algae and fish waste all contribute to a layer of sludge which, unless depleted, severely disrupts the ecosystem in your pond, leading to health problems for your fish.

PondRegulator is a natural, scientifically formulated culture, which safely cleanses and clarifies your pond. It maintains the stability of your biofilm, meaning your filters require less frequent cleaning. It also gets rid of the build-up of complex organic sludge and reduces free inorganic nutrients, to produce clear and healthy water.

PondRegulator improves and stabilizes the dissolved oxygen (DO) concentration within the pond, vital for maintaining the health of your fish.

It depletes the bacteria in sludge that produce noxious gasses, which not only smell bad but can be toxic to fish.

It also helps reduce surface foaming, preventing unsightly staining and the formation of brown scum on the pond surface.

PondRegulator even slows down the build-up of organic waste. It stabilizes a new pond, minimizing the load on new filters and reducing the risk of your fish being poisoned by toxins.

PondRegulator – it's the natural solution for ponds.

	RECONDITION	MAINTENANCE
FREQUENCY	WEEKLY	MONTHLY
DOSE	25	20

Dosage in ml/1000L

Chemical-free, environmentally-sound – and clearly excellent results.

- Dramatically reduces algae and blanket weed
- Acts rapidly on decaying algae to prevent sludge build-up
- Quickly produces clear water to enhance your enjoyment of your fish

“I'm really pleased how clear my pond has become in such a short space of time and my fish are really healthy.”
Mr Alan Laws

3

BioClarity

Algae bloom and blanket weed look bad in any pond but not only that, they create unhealthy conditions for your fish.

Chemical treatments have been the popular way to deal with them and although these are effective in killing off algae and blanket weed, they treat the symptoms and not the underlying problem.

BioClarity is completely different. It dramatically reduces algae bloom and blanket weed in a totally natural way, by reducing the excessive levels of inorganic nutrients on which algae and blanket weed feed.

This means your pond's ecosystem never loses its natural balance and you never have to worry about the detrimental effects chemicals have on your pond.

BioClarity – no chemicals, no worries.
