

EcoStart

Natural help for pond start-up and stock increase.

Left to its own devices, a newly created pond can take weeks to mature. During the time it takes for your biological filter to become conditioned, your fish are increasingly at risk from elevated levels of ammonia and nitrite, toxins produced by the break-down of fish and pond waste.

EcoStart, a completely natural product, rapidly matures your biological filter to minimise the dangers. It contains a highly concentrated mixed culture of nitrifying and denitrifying bacteria, which quickly create a stable and healthy ecosystem by reducing the levels of nitrate and improving water clarity.

Put simply, EcoStart is the quickest and most effective way to give your pond a head start.

Other uses for EcoStart

EcoStart also allows you to safely introduce more stock without any risks to your fish, by boosting your existing system.

Regular use protects the active biofilm in your biological filter from serious degeneration caused by the attack of opportunistic micro-organisms.

After routine cleaning of your biological filter, EcoStart revives and stabilises the entire system, quickly returning it to full maturation and reducing the risk to your fish.

It also provides an effective and immediate treatment to combat ammonia and nitrite spikes which can develop in older or poorly maintained ponds due to the substantial build-up of sludge.

Instructions for Use

- To establish a new filter
One dose is required to establish a new filter, at a rate of 15 ml per 1,000 litres of pond water.
- To recondition your filter after cleaning
Apply the same dose as you would to

establish a new filter (15 ml per 1,000 litres of pond water).

- To add new stock to your pond
Again, apply the same dose as you would to establish a new filter (15 ml per 1,000 litres of pond water).
- How to dose a filter
Shake bottle before use. Dilute the correct quantity of EcoStart into a clean vessel containing 10 litres of pond water. Pour the liquid into the first biological filter bay of your system.

Note: Adequate aeration is necessary for optimum performance.

Quality Standards & Safety QA/QC

- The cultures used in EcoStart are completely safe for fish and plants.
- All EcoPure products are certified by an independent standards laboratory.
- More than one EcoPure Pond System treatment can be used at the same time.

Health & Safety

- Do not ingest. Avoid contact with open wounds. Wash contacted skin with soap and water. If splashed in eyes, wash with water for 10 minutes.

Caution: Keep out of reach of children.

Storage

- Store in a cool dark place (1- 25°C - best stored at 4°C).
- Use within 3 months after opening.

Treatment Capacity

- 1 Litre of EcoStart treats
 - c66,500 Litres
 - c14,500 Gallons

Product Range

- EcoStart is available in a 1 Litre size.
